Max Trescott's Garmin G1000™ CD-ROM Course

New, comprehensive CD-ROM course for the most popular glass cockpit!
Now Available from Glass Cockpit Publishing

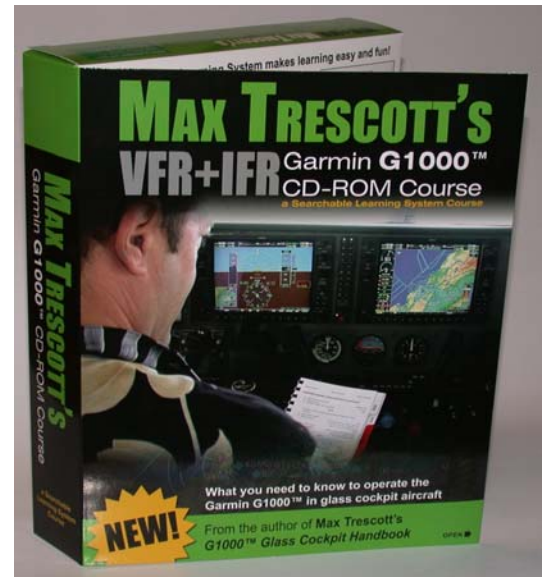

Mountain View, CA—Glass cockpits are an exciting innovation in general aviation that offer the potential for enhanced safety. However, the challenge for owners, potential owners, and renter pilots is how best to learn to fly these exciting new aircraft. Experts agree that learning is enhanced when information is presented through multiple senses. Now you can choose from three complementary ways to learn to operate the popular Garmin G1000 glass cockpit: books, online internet courses and a CD-ROM course.

Building on the popularity of *Max Trescott's G1000 Glass Cockpit Handbook*, and their online internet G1000 training courses at www.pilotlearning.com, Glass Cockpit Publishing announced today the release of their new G1000 CD-ROM course. Whether you're a beginner or an expert, this course will help you master the basics or teach you the fine points of glass cockpit operation. Created and produced by a Master CFI that teaches daily in glass cockpit aircraft, this course not only explains the G1000 system, but teaches you how the features relate to everyday flying.

Max Trescott's Garmin G1000 CD-ROM Course is the only G1000 CD-ROM course with the Searchable Learning System that makes learning fun and lets you easily find any information. Three views let you choose whether to zoom in for full screen displays of the presentation, or to select a view that includes the Searchable Learning System features. The course includes:

- More than six hours on two CD-ROM's making it 50% longer than other courses
- Large, full screen views of displays
- Movie screen captures of operating knobs and softkeys
- Printable G1000 front panel displays, glossary, IFR process chart and approach plates
- Tips from factory and Master CFI's
- Narration by two CFI's for easy listening
- Keyword searchable slides and transcripts
- Indented outline that makes it easy to quickly navigate to any topic
- Optional quizzes to reinforce key points
- Files that run on Windows, Macintosh and Linux

The VFR CD-ROM teaches you everything you need to know prior to taking an initial transition flight in a G1000-equipped aircraft. The IFR CD-ROM first presents IFR as a structured process, providing an excellent overview of IFR for instrument students and instrument rated pilots alike. It thoroughly covers all of the major elements that IFR pilots need to remember during each phase of an IFR flight, and integrates use of the G1000 into each of the IFR processes.
