First Online G1000™ Transition Training Courses

New, convenient way to learn the world's most popular glass cockpit!
Now Available from Glass Cockpit Publishing

Mountain View, CA—There's a revolution sweeping through general aviation and flight training. Two years ago, few aircraft shipped with glass cockpits. Now, nearly 100% of all new GA aircraft ship with glass cockpits, most of them Garmin G1000™. Whether you're an owner, potential owner, or renter (more than 150 locations rent G1000 planes), you'll want to become expert at flying these exciting new aircraft and benefit from their enhanced safety.

Also, *online training*, via the internet, has been available in other industries for years but is just now becoming available for aviation topics. Glass Cockpit Publishing, publishers of *Max Trescott's G1000 Glass Cockpit Handbook*, announced today that they are the first to offer online training, via the internet, for the Garmin G1000. Two courses, each priced at \$99, went live yesterday on their new www.PilotLearning.com website.

The VFR G1000 Transition training course teaches pilots everything they need to know prior to taking an initial transition flight in a G1000-equipped aircraft. The IFR G1000 Transition training course not only covers the G1000, but also presents IFR as a structured process. It thoroughly covers all of the major elements that IFR pilots need to remember during every phase of an IFR flight, and integrates use of the G1000 into each of the IFR processes. Together, the two courses include over six hours of material, making them about 50% longer than any of the G1000 CD-ROM's on the market.

Max Trescott, a Master CFI who teaches daily in glass cockpit aircraft, takes a narrative approach to explaining the G1000 in ways that both beginners and experts can understand. Not only is every system feature explained, but information on when and why you'd use a particular function are also included. Throughout the online lessons, you'll find tips, information on common errors, and quizzes that test your comprehension.

The online VFR and IFR transition training courses are available immediately at www.pilotlearning.com.

Max Trescott's G1000 Glass Cockpit Handbook, released in February, 2006, is available for \$34.95 and orders can be placed through www.glasscockpitbooks.com or 800-247-6553.

Note: Members of the media wishing to try the online training can call 650-224-7124 for an access code.
